

K12 CERTIFIED SWING GATE

After the crash test, this Gate was still completely operational.

The Crash Gate was tested using a 15,000 lb crash vehicle running at 50mph. Upon impact the Gate moved less than 6" while totally disabling the vehicle. The bumper of the crash vehicle protruded through the gate less than 16" blowing away the L3 requirement of a minimum of 36".

After the crash the vehicle was pulled away from the gate. The gate was then inspected found to be in excellent condition. The gate was operable and opened by one man who did not require the use of any power tools or equipment.

Please see enclosed CD for more details.

With a minimum of damage the Crash Gate was able to completely disable the vehicle and keep the 5K lb barricade strapped to the back of the vehicle from pitching forward even though the barricade broke its restraints.

The Crash Gate should be utilized at all entrances to ammo dumps, POL dumps, embassies, dams, all nuclear areas, and any area of importance worth the maximum amount of protection.

K12 , K8, and K4 Rated Gates are also available.
