## PERIMETER SECURITY VEIL

The Perimeter Security Veil will greatly increase the warfighters ability to view the exterior of the perimeter and maintain concealment from enemy view.

The PSV can be utilized to hide the view for your guards from enemy snipers. The PSV may be used to protect facilities that are crucial to national defense such as Tactical Operations Centers (TOC), Communications Command and Control (C3) facilities, aircraft, vehicle or towed weapons, Petroleum, Oil, Lubricants (POL) storage facilities and medical facilities.

An evaluation of the PSV was done by US Army Military Police School (USAMPS), concluding results showed that the PSV is a very useful way of blocking the enemy's view of the

valuable assets inside of a facility, while allowing the warfighter the capability of detecting and assessing targets on the exterior of the perimeter.

The PSV has demonstrated that it meets or exceeds the requirements as determined by USAMPS. The PSV can be quickly, easily and efficiently attached to fences, walls or various other Force Protection items. It is easily recoverable for deployment at an alternate location.

Made in the USA of special made fabric. The Veil is 10 meters (approx. 33 feet) long and 7 1/2 feet tall. Includes all items necessary for attachment. The PSV is available through GSA Contract #GS-07F-9574S.
